

CNC PROGRAMMER / OPERATOR

Our wood and acrylic-based manufacturing company is seeking a CNC Programmer with experience programming Multicam CNC Routers. You will develop new CNC programs for production runs or modify existing programs for production jobs. You will run the programs and perform quality checks while operating the machine to ensure the program is producing parts according to specifications, making manual adjustments if necessary. Although no formal education is required, applicants should be familiar with the computer-aided design programs (Enroute and Multicam software knowledge is a plus) as well as familiarity in Adobe Illustrator and the capability to open and work in AI and PDF.

Duties and Responsibilities:

- Develop CNC programs for production
- Analyze drawings to determine dimensions and to choose cutting tools, machine speeds, and feed rates
- Modify existing programs to optimize CNC performance
- Maintain tooling database
- Make manual program adjustments as necessary
- Troubleshoot issues during the manufacturing process
- Perform regular maintenance on the machine
- Generate and maintain programs and setup sheets in a high mix/low volume environment

Job Requirements and Qualifications:

- High school diploma or GED certificate
- Completion of a technical or associate degree program a plus
- Experience programming CNC routers
- Familiarity with CNC Router Machining Programs (Multicam and EnRoute is a plus)
- Basic math skills
- Meet or exceed typical expectations for creativity, production, quality and safety
- Have a good work record of self-motivation, judgment, productivity and safety
- Ability to lift 40 lbs. unassisted
